

The 70VS-MS is a variable speed **GREEN** product that utilizes exclusive B&G Technologic pumping software and proven algorithms. Bell & Gossett controls and packages are designed with **Energy Savings, Efficiency, Lowering of Utility Costs, and Equipment Protection** in mind.

About the NSF Certification

NSF International (NSF) is an independent, not-for-profit organization of scientists, engineers, technicians, educators, and analysts. It is a trusted neutral non-governmental agency, serving government, industry, and consumers in achieving solutions to problems relating to public health and the environment since 1944. The mission of NSF is to provide clients and the general public with objective, high quality, timely, third-party certification services. NSF is the world leader in standards development, voluntary product testing and certification, education, training, and research related to public health and the environmental sciences. The NSF Mark is recognized for its value both internationally as well as at the local, state, and federal levels.

NSF-61: Drinking Water System Components – Health Effects

Standard 61 is intended to cover specific materials or products that come into contact with drinking water. The focus of the Standard is to evaluate the contaminants or impurities passed on indirectly to drinking water. This Standard establishes minimum health effects requirements for the leached impurities. It does not set criteria for performance, taste and odor, or microbial growth for the covered materials and products. Besides pumping systems such as the 70VS, the standard covers process media, protective materials, joining and sealing materials, pipes and related products, mechanical devices used in treatment/transmission/distribution systems, and mechanical plumbing devices. In the United States, 45 states currently have requirements for water treatment and distribution components to comply with NSF/ANSI Standard 61.

IAPMO R&T Lab

International Association of Plumbing and Mechanical Officials Research & testing Lab backed by more than 80 years of IAPMO experience, the IAPMO R&T Lab is a trusted name for independent testing, research, and technical services in the plumbing and mechanical industries. ITT selected this lab as the 3rd-party certifier for pressure booster packages.

As a result of obtaining certification, each qualifying 70VS-MS system will be permanently and legibly marked to identify this certification and bear all other markings required by the standard. The sticker shown below will be located where it can be readily seen after installation is complete.
